

The EOES (European Olympiad of Experimental Science) is a yearly science competition designed for young students (under 17 years) from the European Union. It is coordinated by a member country of the EOES NPO. Over 20 countries participate, each sending two teams, each consisting of three participants. The teams are tasked with completing two assignments, focusing on their skills in biology, chemistry, and physics. In university or high school labs students are required to explore a specific phenomenon in an interdisciplinary way through various experiments.

Due to COVID, the Olympiad took place at the same time in each country

Hradec Králové  
(Czech Republic)

Riga  
(Latvia)
